SERIES 151

MINIATURE MIL-DTL-55116 TYPE AUDIO FREQUENCY CONNECTORS

**HIGH RELIABILITY PERFORMANCE FOR
MISSION-CRITICAL COMMUNICATION SYSTEMS**

The MIL-DTL-55116 audio frequency connector has been used in tactical radio systems for generations. Now, this reliable, field-cleanable interconnect has been specified for use in the Joint Tactical Radio System—the next generation voice and data radio for U.S. military field operations, ensuring its continued use and service to soldiers, sailors and airmen. The Glenair MIL-DTL-55116 Type connector is manufactured in our Glendale, California factory with materials and processes guaranteed to result in the best performing and most reliable connector system available. Best of all, these products—from crimp and solder termination cable plugs, to ruggedized and sealed receptacles are in-stock and available for immediate, same-day shipment.

Performance Specifications

Page 2

Performance Specifications

Connector test and performance specifications per MIL-DTL-55116 Type and other applicable standards.

Audio Plug

Page 4

151-001

Series 151-001 MIL-DTL-55116 Type Audio Plug

151-001 cable plug versions are supplied with either crimp or solder cup contacts, and integrated cable strain relief. Five- and six-pin insert arrangements are available for reliable environmental service in handheld tactical radios and base station consoles.

Molded Audio Plug

Page 5

151-002

Series 151-002 MIL-DTL-55116 Type Molded Audio Plug

151-002 molded plug versions are supplied with either crimp or solder cup contacts, and are designed for easy assembly into overmolded cables and cordsets. Five- and six-pin insert arrangements are available for reliable environmental service in tactical communications systems.

Panel Mount Receptacle

Page 6

151-003

Series 151-003 MIL-DTL-55116 Type Jam Nut Receptacle

151-003 panel mount jam nut receptacles are designed to mate with 151-001 and 151-002 audio plugs, and are equipped with sealed, spring-loaded, pogo pin solder cup contacts. Five- and six-pin insert arrangements are available for reliable mating with tactical headsets and handsets.

In-Line Receptacle

Page 7

151-004

Series 151-004 MIL-DTL-55116 Type In-Line Receptacle

151-004 in-line receptacles are designed to mate with 151-001 and 151-002 audio plugs, and are used in the fabrication of long-run jumper cables. In-line receptacles are supplied with integrated strain relief, and are available with either solder cup or crimp pogo pin contacts.

Series 151 Miniature MIL-DTL-55116 Type Audio Frequency Connectors Performance Specifications

Test Description	Performance Requirements/Specifications	Procedure Per MIL-DTL-55116 Or Other Standard
Dielectric withstanding voltage	No arcing or dielectric breakdown. Sea level: 500 V RMS between each contact, remaining contacts connected together, and to the shell. One minute dwell. High altitude: barometric pressure 3.4 in of mercury, 300 V RMS applied as described above.	4.7.1
Insulation resistance	Not less than 1000 megohms (not less than 100 megohms for unmated connectors following the immersion test). Measured between each contact, remaining contacts connected together, and to the shell.	4.7.2
Contact resistance	Terminal-to-terminal resistance of mated connector contacts shall not exceed 0.050 ohms.	4.7.3
Contact depression	Force required to depress contacts .080 inches from the normal plane of the contact face: <i>Individual contacts: 1.25 lbs. – 1.75 lbs.</i> <i>5 contacts: 6.25 lbs. – 8.75 lbs.</i> <i>6 contacts: 7.5 lbs. – 10.5 lbs.</i>	4.8.1
Air pressure	No evidence of leakage through the connector under 2.5 psi applied to contact face and rear of the plug or receptacle	4.8.2
Mating durability	3000 cycles with no mechanical damage. Dielectric, contact resistance and air pressure requirements as described above shall be met after 3000 mating cycles.	4.8.3
Contact retention	Individual contacts capable of withstanding at least 10 pounds axial load applied uniformly at one pound per second.	4.8.4
Compression	No distortion or damage that would affect form, fit, or function at 500 pounds applied to axis.	4.8.6
Pull test	Connectors shall withstand an abrupt axial force of 40 lbs. applied to the shell, and 25 lbs. applied to the cable with no visible damage, and lock and unlock without difficulty.	4.8.7
Bounce	Test on package testing table, operating at 284±2 rpm for 3 hours, circular-synchronous motion in a vertical plane with a one in dia. orbital displacement. Connectors show no evidence of cracking, breaking, or loosening. Connectors will meet electrical and leakage requirements following test.	4.9.1

**Series 151 Miniature MIL-DTL-55116 Type
Audio Frequency Connectors
Performance Specifications**

Test Description	Performance Requirements/Specifications	Procedure Per MIL-DTL-55116 Or Other Standard
Vibration	Plugs and receptacles mounted to vibration table, subjected to a simple harmonic motion with amplitude of 0.03 inch (0.06 maximum), frequency varied uniformly from 10-55 Hz., entire range traversed in approximately one minute, for two hours in each of three perpendicular directions. No evidence of cracking, breaking or loosening of parts, and the plug shall not become disengaged from the receptacle.	4.9.2 and MIL-STD-202G, method 201A
Drop	Connectors dropped six times at random from a height of six feet to two inch fir floor backed with concrete or rigid steel frame shall show no degradation in performance, no physical damage that would affect mateability, and no loose parts. Following the test, connectors shall meet electrical and air leakage requirements described above.	4.9.3
Temperature cycling	-55°C to +85°C, 5 cycles. Connectors are capable of mating and unmating during fifth cycle, and meet electrical and air leakage requirements described above.	MIL-STD-202, method 107, test condition A
Salt spray	48 hours, 5% solution, 35°C min. No evidence of base metal corrosion.	MIL-STD-202, method 101E, test condition B
Humidity	50% mated and 50% unmated, cycled between 25°C at 80% relative humidity and 65°C at 50% relative humidity. Ramp time = 0.5 hr. Dwell time = 1.0 hr., 24 cycles. Following test, connectors meet electrical and air leakage requirements described above.	4.9.6 and EIA-364-31, method IV (step 7a not required)
Water immersion	Plugs assembled to test cables and each other, and to receptacles, immersed in tap water to a depth of six feet for 48 hours. No evidence of leakage into the body of unmated connectors or into the body or contact-face area of mated connectors.	4.9.7

Materials and Finishes

Shells and Jam Nuts: Stainless steel/passivated
 Inserts: Diallylphthalate resin type SDG-F
 Loading Sleeve: Nylon 6/6, white
 Seals: Ethylene propylene rubber
 Strain Relief Spring: Steel corrosion resistant wire/chemical blackening
 Contacts: Copper alloy/gold plate

Notes

Assembly to be identified with Glenair's name, part number and date code space permitting. Contact arrangement shown is for 6 pin arrangement, Center pin is removed for 5 pin arrangement.
 Designed to meet interface configurations and IAW specifications of MIL-DTL-55116 TypeC.

Field Serviceable with Wire Strain Relief

MIL-DTL-55116 type audio plug, field serviceable with wire strain relief

These Series 151 MIL-DTL-55116 Type audio plugs are designed for high-reliability, severe environment radio communications equipment. They are available in both 5 pin and 6 pin configurations, with either crimp sleeve or solder cup pogo pin terminals. All feature versatile wire strain relief to protect cable conductors from damage. Shells are made of passivated stainless steel, contacts are gold plated copper alloy. Plug connector contacts are sealed in the unmated condition.
